Paper 1 Theory Fundamentals

May/June 2021

1 hour 30 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use an HB pencil for any diagrams, graphs or rough working.
- Calculators must not be used in this paper.

INFORMATION

- The total mark for this paper is 75.
- The number of marks for each question or part question is shown in brackets [].
- No marks will be awarded for using brand names of software packages or hardware.

This document has 16 pages.

[3]

1	Anva	scans an	image	into	her	computer	for a	school	proi	ect
	Allya	scaris ari	iiiiagc	IIII	IICI	computer	101 6	3011001	pioj	COL.

- (a) The scanned image is a bitmapped image.
 - (i) Complete the following table to describe the two terms about graphics.

Term	Description						
Pixel							
File header							
	[2]						
	image is scanned with an image resolution of 1024 \times 512 pixels, and a colour depth bits per pixel.						
	Calculate an estimate for the file size, giving your answer in mebibytes. Show your working.						
Wor	king						
Ans	wer mebibytes [3]						
(b) The imag	ge is compressed using lossless compression.						
	one method of lossless compression that can be used to compress the image and how the method will reduce the file size.						
Lossless	Lossless compression method						
Descripti	on						

[3]

(c) One of the colours used in the image has the hexadecimal colour code:

#FC238A

	1 G23 G11
FC	is the amount of red, 23 is the amount of green and 8A is the amount of blue in the colour.
(i)	Convert the hexadecimal code FC into denary.
	[1]
(ii)	The amount of green in binary is 00100011. This has the denary number 15 added to it to create a second colour.
	Add the denary number 15 to the binary number 00100011 and give your answer in binary.
	Perform the addition in binary. Show your working.
	Working
	Answer (in binary)
	[3]
(iii)	Hexadecimal 23 in two's complement representation is 00100011. The denary number 10 needs to be subtracted from this value.
	Subtract the denary number 10 from the two's complement representation 00100011.
	Give your answer in binary. Show your working.
	Working

Answer (in binary)

Anya made sure that the image was not subject to any copyright before scanning it.
Describe what is meant by copyright .

2	Binawen's com	puter comes with	an Operating S	vstem and utility	v software

(a) Draw one line from each utility software to its correct description.

(b)

Utility software	Description
	Scans software for errors and repairs the problems
Disk formatter	Moves parts of files so that each file is contiguous in memory
Defragmentation	Creates a copy of data that is no longer required
Back-up	Sets up a disk so it is ready to store files
Disk repair	Scans for errors in a disk and corrects them
	Creates a copy of data in case the original is lost
	[4]
Identify four key manageme	nt tasks that the Operating System will perform.
1	
2	
3	
4	[4]

3	A processor	has	one	general	purpose	register,	the	Accumulator	(ACC),	and	several	special
	purpose regis	sters.										

(a)	Complete the following description of the role of the registers in the fetch-execute cycle by
	writing the missing registers.

The	holds the address of the next instruction
to be loaded. This address is sent to the	
The	holds the data fetched from this address.
This data is sent to the	and the Control Unit
decodes the instruction's opcode.	
The	is incremented. [5]

(b) The following table shows part of the instruction set for a processor. The processor has one general purpose register, the Accumulator (ACC), and an Index Register (IX).

Instruction		Evalenation			
Opcode	Operand	- Explanation			
LDM	#n	Immediate addressing. Load the number n to ACC			
LDD	<address></address>	Direct addressing. Load the contents of the location at the given address to ACC			
LDI	<address></address>	Indirect addressing: The address to be used is at the given address. Load the contents of this second address to ACC			
LDX	<address></address>	Indexed addressing. Form the address from <address> + the contents of the Index Register. Copy the contents of this calculated address to ACC</address>			
LDR	#n	Immediate addressing. Load the number n to IX			
VOM	<register></register>	Move the contents of the accumulator to the given register (IX)			
STO	<address></address>	Store contents of ACC at the given address			
ADD	<address></address>	Add the contents of the given address to the ACC			
INC	<register></register>	Add 1 to the contents of the register (ACC or IX)			
CMP	<address></address>	Compare the contents of ACC with the contents of <address></address>			
JPE	<address></address>	Following a compare instruction, jump to <address> if the compare was True</address>			
JPN	<address></address>	Following a compare instruction, jump to <address> if the compare was False</address>			
JMP	<address></address>	Jump to the given address			
OUT		Output to the screen the character whose ASCII value is stored in ACC			
END		Return control to the operating system			
LSL	#n	Bits in ACC are shifted logically n places to the left. Zeros are introduced on the right hand end			
LSR	#n	Bits in ACC are shifted logically n places to the right. Zeros are introduced on the left hand end			

<address> can be an absolute address or a symbolic address # denotes a denary number, e.g. #123

The current contents of the main memory and selected values from the ASCII character set are shown.

Address	Instruction
200	LDD 365
201	CMP 366
202	JPE 209
203	INC ACC
204	STO 365
205	MOV IX
206	LDX 365
207	OUT
208	JMP 200
209	END
365	1
366	3
367	65
368	66
IX	0

ASCII code table (selected codes only)

ASCII code	Character
65	A
66	В
67	С
68	D

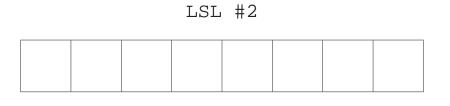

Complete the trace table for the program currently in main memory.

Instruction	100	Memory address			TV	Output	
address	ACC	365	366	367	368	IX	Output
		1	3	65	66	0	

((c)	(i)	The Accumulator	currently	contains	the binar	v number
١	(\mathbf{v})	, (<u>'</u> ,	The Accumulator	Currentity	Contains	tile billar	y mannoci

0	0	1	1	0	1	0	1
U	U	Ι Τ	Т	U	Τ	U	Т Т

Write the contents of the Accumulator after the processor has executed the following instruction:

[1]

(ii) The Accumulator currently contains the binary number:

0	0	1	1	0	1	0	1
---	---	---	---	---	---	---	---

Identify the mathematical operation that the following instruction will perform on the contents of the accumulator.

LSR #3

4	Mel	linda and her friends set up a peer-to-peer network between their computers to share data.	
	(a)	Describe the key features of a peer-to-peer network.	
	(b)	Describe two drawbacks to Melinda and her friends of using a peer-to-peer network.	
		1	
		2	
			[4]
	(c)	Melinda connects her laptop to the internet through her router.	
		(i) Tick (✓) one box in each row to identify whether the task is performed by the router not.	OI

Task	Performed by router	Not performed by router
Receives packets from devices		
Finds the IP address of a Uniform Resource Locator (URL)		
Directs each packet to all devices attached to it		
Stores the IP and/or MAC address of all devices attached to it		

	(ii) Melinda mainly uses the internet to watch films and play computer games.
	Tick (✓) one box to identify whether Melinda should connect to the router using a wired or wireless network and justify your choice.
	Wired
	Wireless
	Justification
	[3]
(d)	Melinda sends emails from her webmail account (email account accessed through a website).
	Explain whether Melinda is using the internet, or the World Wide Web (WWW), or both.

5

Kiaı	Kiara has a washing machine and a refrigerator.							
(a)	She has an embedded system in her washing machine.							
	Describe what is meant by an embedded system , using the washing machine as an example.							
	[2]							
(b)	The washing machine's embedded system makes use of both Random Access Memory (RAM) and Read Only Memory (ROM).							
	State the purpose of RAM and ROM within the washing machine's embedded system.							
	RAM							
	ROM							
	[2]							
(c)	The temperature in her refrigerator must be kept between 4 and 6 degrees Celsius.							
	The microprocessor in the refrigerator turns on the cooling if the temperature is too high, and turns off the cooling if the temperature is too low.							
	Explain why the system in the refrigerator is a control and not a monitoring system.							
	[2]							

6 Each of the following algorithms performs data validation.

State the type of validation check that each of the algorithms performs.

```
(a)
```

```
INPUT x
IF x < 0 OR x > 10 THEN
 OUTPUT "Invalid"
ENDIF
(b)
INPUT x
IF x = "" THEN
 OUTPUT "Invalid"
ENDIF
(c)
INPUT x
IF NOT(x = "Red" OR x = "Yellow" OR x = "Blue") THEN
 OUTPUT "Invalid"
ENDIF
......[1]
```
